Detailed description

Thanks to its simple and functional design, the versatile stackable chair is suitable for many uses, not only for schools.

The chair's frame is made of a 20-mm-diameter steel tube with a 1.5-mm wall thickness, which ensures its high durability and load capacity of up to 120 kg. The metal structure is powder-coated in the timeless RAL 9006 (white aluminium).

The chair is standardly equipped with a seat and backrest made of 8 mm thick varnished beech plywood and a practical folding writing pad made of 18 mm thick beech plywood.

The chair is low maintenance and easy to clean.

Swatches of colors and other finishes are available to tailor the chair to specific requirements.

Maintenance

The metal and beech plywood surfaces can be maintained with common cleaning agents, with the exception of aggressive cleaners, detergents, polishes, and products containing granules and sand. Do not expose the chair to excessive moisture or running water or to temperatures above 90 °C.
