Glides:	Without felt
Footrest:	Aluminium, plastic

You can view or download the colour and accessory adjustment sheets from our website.

Detailed description

The modern Z92 chair is a versatile product, particularly suitable for classrooms where the year groups change regularly (e.g. language classrooms). The chair's design is complemented by an adjustable footrest, which increases ergonomic comfort for users of different heights.

The base of the chair is made of 22 mm diameter steel tubes, which ensures high strength and stability. The steel elements are powder coated in RAL 9006 (white aluminium).

The chair's shell is made of 100% polypropylene and has an anti-slip structure. Its 3D shape provides excellent ergonomics, especially in the back's lumbar region, ensuring comfort even when sitting for long periods. The top of the backrest has a molded grip for easy handling. The shell is available in several standard colors, but almost any color is possible on request.

The adjustable footrest is made of an aluminum profile and is firmly attached to the chair structure using plastic end caps and metal pins. A sliding mechanism on the underside of the profile allows easy adjustment of the footrest height. The mechanism is designed to be easy for students to use.

Maintenance

Metal and plastic surfaces can be maintained with common cleaning agents, with the exception of aggressive cleaners, detergents, polishes, and products containing granules and sand. Do not expose the chair to excessive moisture or running water or to temperatures above 90 °C.
