Detailed description

The minimalist design of the JL40V desk helps create a modern and functional space in educational institutions. The desk allows height adjustment without the need for tools in the 3-5 or 5-7 version. The adjustment system is equipped with a screw, which with the usage of tools, can be used to block manual adjustment.

The frame is made of 50x30mm flat-oval steel profiles and is powder-coated in a neutral shade of RAL 9006 (white aluminum). It also includes a practical hook for hanging a school backpack. The glides are without felt. This component can be replaced with a felt variant.

The desk has a worktop, TYPE A, made of 18-mm-thick laminated chipboard with a 2-mm ABS edge and sharp corners, measuring 70x50cm. The worktop is standard in white or beech finish, but it can be configured in type and finish according to demand.

The desk is low maintenance and easy to clean.

Maintenance

The metal surface and the worktop surface can be maintained with common cleaning agents, except aggressive cleaners, detergents, polishes, and products containing granules and sand. Do not expose the product to excessive moisture, running water, or temperatures above 90 °C.
