School Furniture – Lockers

SF01 – SF09

Product Description

The locker furniture is designed with a focus on functionality, durability, and safety, making it an ideal choice for school environments. It combines modern design, high resistance, and precise craftsmanship to provide a long-lasting and reliable solution for any educational facility.

Robust Construction: Lockers are made from double-sided laminated chipboard panels with a thickness of 18 mm, ensuring high resistance to mechanical damage and easy maintenance.

Strong Joints: Dowel joints are used to ensure maximum structural rigidity, providing stability and strength even under heavy daily use.

Metal Benches: Some locker models are equipped with practical benches. The bench frame is powder-coated for enhanced durability.

Modern Hardware: Locker doors are fitted with hinges allowing up to 110° opening for easy access to stored items.

Safe Edges: Locker bodies are finished with ABS edging, offering protection against damage and enhancing the furniture's appearance.

Ready for Immediate Use: The furniture is delivered pre-assembled (compressed) to save time and simplify installation.

Alternative Full-Metal Design

Consider full-metal lockers if you are looking for an alternative to chipboard wardrobes. Thanks to their stronger construction and options for different types of locks, these lockers are not only easy to maintain but also provide a high level of security.

We will happily provide you with more detailed information and a quote based on your inquiry.
