Detailed description

The base of the chair is made from 22 mm steel tubing, ensuring high rigidity. The steel parts are treated with a powder coating, standard in the neutral shade RAL 9006 (White Aluminium).

The shell is made of 100% polypropylene with an anti-slip surface structure. Thanks to its 3D shaping, it provides excellent ergonomics, particularly in the lumbar area, ensuring comfort even during longer sitting periods. At the top edge of the backrest, a molded grip is integrated for easy handling. The shell is available in several standard colors, with the option of almost any shade upon request.

Carefully selected materials make the chair easy to clean and low maintenance.

Maintenance

Surfaces can be maintained with common cleaning agents, with the exception of aggressive cleaners, detergents, polishes, and products containing granules and sand. Do not expose the chair to excessive moisture or running water or to temperatures above 90 °C.
